HOUSING CHANGE IN GLASGOW

An Analysis of 2001 and 2011 Census Results

Date of Publication: 9 May 2016

PLEASE NOTE THE FOLLOWING:

Any Ordnance Survey mapping included within this Report is provided by Glasgow City Council under licence from the Ordnance Survey in order to fulfil its public function to make available Council-held public domain information. Persons viewing this mapping should contact Ordnance Survey Copyright for advice where they wish to licence Ordnance Survey mapping/map data for their own use. 1 INTRODUCTION

- 1.1 On 30th September 2014, the Council's Regeneration and the Economy Policy Development Committee discussed a report "Demographic Changes in Glasgow City and Neighbourhoods", which gave the results, for Glasgow, of 2011 Census data release 2. The report informed Committee of DRS plans to submit three topic reports, following the release of more detailed Census data (release 3) by National Records of Scotland (NRS). These reports have now been discussed by Committee: (1) "Glasgow's population by ethnicity" on 29th September 2015; (2) "2011 Census results and Glasgow's economy" on 17th November 2015 and (3) "2011 Census results and housing in Glasgow" on 19th April 2016. This briefing paper contains the main content of the third Committee report with minor amendments and addition of background data.
- 1.2 Comparison of results over time has been limited due to changes in questionnaire and variable categorisations between the 2001 and 2011 Censuses. For example, the question on "limiting long term health problem or disability" on the 2001 Census form only asks whether people have any long-term illness, health problem or disability which limits their daily activities or the work they can do. The 2011 Census form asks more detail, i.e. whether people are "limited a lot", "limited a little" or "not limited" in their daily activities because of a health problem or disability which has lasted, or is expected to last, at least 12 months.
- 1.3 This briefing paper focuses on the housing results for Glasgow and compares these with the Scotland results. Chapter 2 gives the main results from the analysis. Then there is a more detailed discussion of findings at a City-wide level in chapter 3. The latter discussion includes some consideration of patterns by neighbourhood.
- 1.4 It is recognised that now, in 2016, the 2011 Census results are somewhat dated. In view of this, DRS plans to prepare a paper on demographic changes in Glasgow since 2011 for publication on the Council's website later this year.
- 1.5 Issues of ethnicity in relation to Housing in Glasgow have not been included in any detail in this paper. These issues have already been considered in chapter 5 of the briefing paper "Glasgow's population by ethnicity – an analysis of 2011 Census results", which has been published on the Council's website: <https://glasgow.gov.uk/CHttpHandler.ashx?id=30615&p=0>
- 1.6 Figures in the text of the paper have been rounded to the nearest 100 and percentages are given with a single decimal.
- 1.7 The Appendix gives, in 2001 and 2011 Census Tables A1 to A46, the source data of the Graphs and Maps in the main text of this paper.

2 MAIN RESULTS

Population and Number of Dwellings

- 2.1 Between 2001 and 2011 Glasgow's population rose by 2.7% and the number of dwellings rose by 4.1%. These rates of change are positive, but lower than the Scottish average.

Tenure

- 2.2 The **private rented sector** has grown by 124.3% in Glasgow since 2001. This is considerably above the 85.6% rate of growth in Scotland.
- 2.3 The growth of private renting in Glasgow has been driven largely by young adults. Between 2001 and 2011 the number of people in private rented accommodation in Glasgow rose from 22,500 to 49,300 for the age group "15 to 29" and from 9,200 to 23,100 for the age group "30 to 44".
- 2.4 There has also been a considerable increase in the number of children who live in a private rented home. The number of couple families has risen from 1,300 to 3,800 and the number of lone parent families has risen from 2,400 to 5,400.
- 2.5 Student households have contributed 3,400 to the rise in private rented households in Glasgow. In 2011 the private rented sector includes 4,000 students living alone and 5,500 all-student households.
- 2.6 The **owner occupied sector** in Glasgow declined by 1.2% since 2001. This compares with 7.2% growth in Scotland.
- 2.7 There is an ageing population in Glasgow's owner occupied sector. Between 2001 and 2011 the age-group "0 to 44" **reduced** by 29,200 and the age group "45+" **increased** by 17,600.
- 2.8 There has been a sizable reduction in the number of children who live in owner occupied housing. Since 2001 the number of couple families fell by 3,000 and the number of lone parent families fell by 500.
- 2.9 The **social rented sector** in Glasgow declined by 10.6% since 2001, which is the same rate of decline as in Scotland. But the impact is greater for Glasgow because social rented housing makes up a larger share of the dwelling stock (in 2011: 36.7%, compared with 24.3% for Scotland).
- 2.10 The number of elderly social renters (age 65+) fell by 11,500 in 2001-2011.
- 2.11 There has been a sizable reduction in the number of children in the social rented sector. Since 2001 the number of couple families fell by 1,200 and the number of lone parent families fell by 3,900.

Overcrowding

- 2.12 Overcrowding in Glasgow has reduced since 2001. But the rate for Glasgow (17.4% of households) is still about twice the national average (9.0% of households). Overcrowding is highest in the private rented sector (26.2% of households).

Central Heating

- 2.13 In 2011, 4.0% of households in Glasgow are without central heating. The comparable figure is 2.3% for Scotland.

Ethnicity

- 2.14 The percentage of "Other White and BME" households has increased in Glasgow from 7.7% in 2001 to 14.4% in 2011. This has had the biggest impact on the private rented and social rented sectors.

Health

- 2.15 Glasgow's population has a worse state of health than the Scotland average. 22.4% of the population in Glasgow has an illness or disability which limits their day-to-day activities. This compares with 19.2% of Scotland's population.
- 2.16 37.5% of households in Glasgow have at least 1 member with a limiting long term illness (Scotland: 34.7%). In some deprived areas in Glasgow over 50% of households contain someone with a limiting long term illness.
- 2.17 There is a concentration of people with a limiting long term illness or disability in the social rented sector. The sector provides accommodation for 33.7% of Glasgow residents in households. These residents include 52.7% of Glasgow residents with a limiting long term illness or disability.

Economic Status

- 2.18 Employment rates are highest for people in owner occupation (at 77.5%) and lowest for people in social rented accommodation (at 41.7%). Unemployment is high for the age group "16 to 34" in social rented housing.
- 2.19 There is evidence that the rise of employment in Glasgow between 2001 and 2011 has resulted in an increase of the employment rate for people who live in social rented housing.

Access to a Car or Van

- 2.20 Between 2001 and 2011 the percentage of households with access to a car in Glasgow has risen by 5.4%, from 43.8% to 49.2%. Car access rates have risen for all three tenures in Glasgow, particularly for the owner occupied and social rented tenures.

3 GLASGOW CITY RESULTS

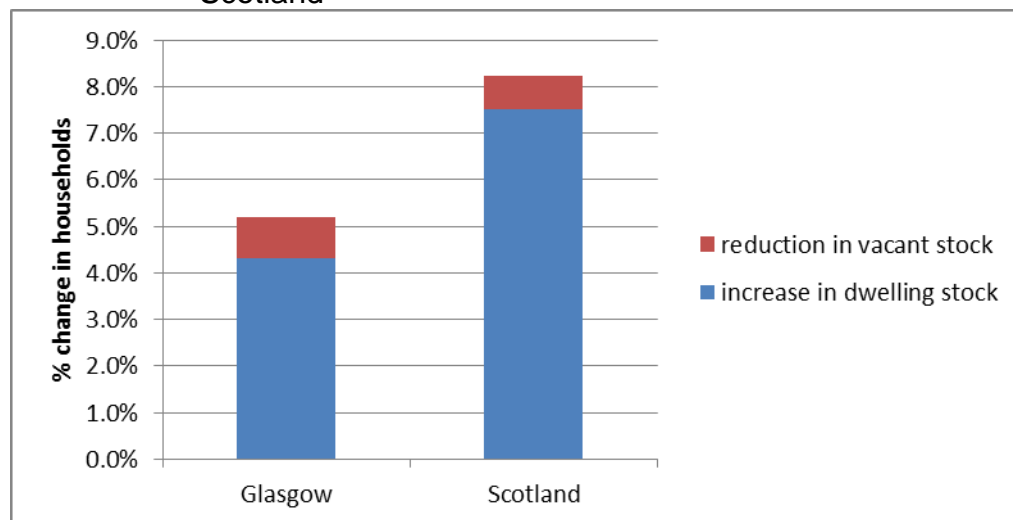

3.1 This chapter focuses on Census results at a Glasgow City level, with some consideration of patterns by neighbourhood within the City.

Changes in Dwellings

3.2 Between 2001 and 2011 the number of dwellings rose by 4.1% in Glasgow and by 7.2% in Scotland.

3.3 The number of households rose at a higher rate, by 5.2% in Glasgow and 8.2% in Scotland. This led to a reduction in vacant stock (see Figure 3.1).

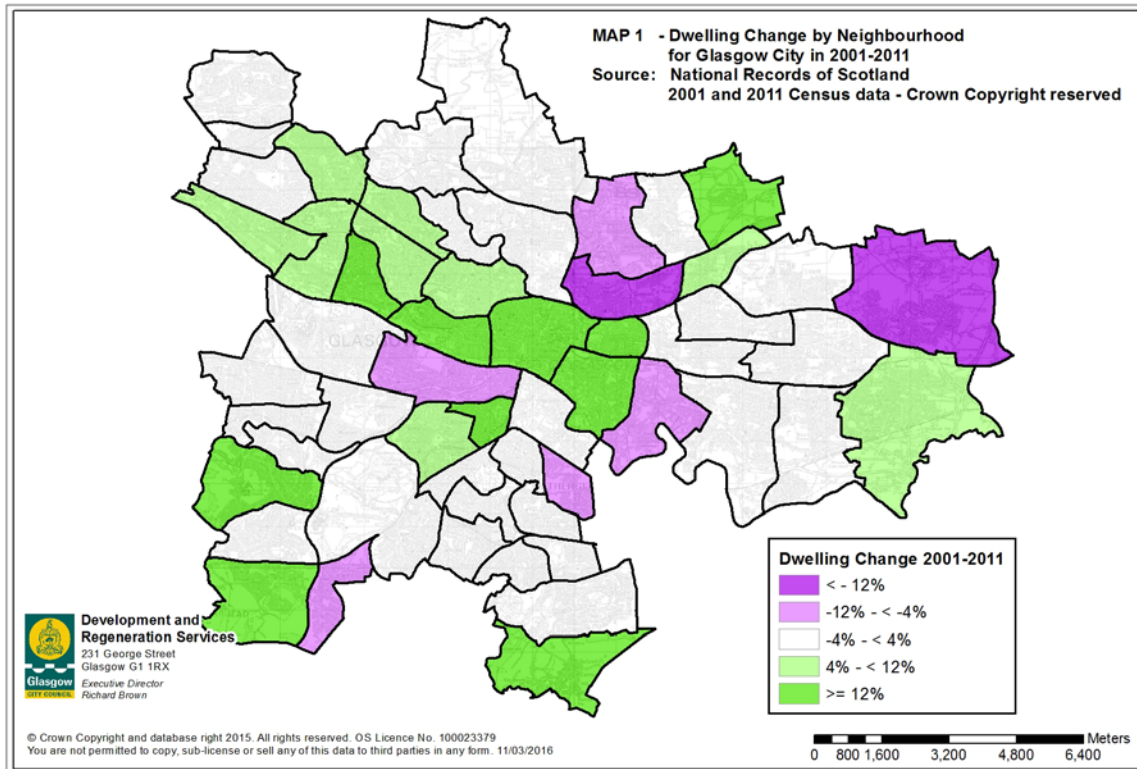

Figure 3.1 – Change in number of households in 2001-2011 for Glasgow and Scotland

Source: NRS – 2001 and 2011 Census - Crown Copyright

3.4 Map1 (see next page) shows that the fastest rise in the number of dwellings has been in some neighbourhoods north of the river Clyde: Calton/Bridgeton (32.4%), City Centre/Merchant City (39.7%), Yorkhill/Anderston (28.1%) and Broomhill/Partick West (26.4%). Other areas of considerable growth are Pollokshields East (19.4%), Pollok (18.8%), South Nitshill/Darnley (23.0%) and Carmunnock (21.4%).

3.5 Sighthill/Roystonhill saw by far the highest rate of reduction in the number of dwellings (-19.0%). Other areas where the dwelling stock has reduced are Ibrox/Kingston (-7.9%), Toryglen (-7.2%), Parkhead/Dalmarnock (-5.8%), Easterhouse (-12.3%, of -4.6% is the effect of a boundary change) and Springburn (-5.8%).

- 3.6 The 2011 Census results show that there are around 200 shared dwellings in Glasgow with around 600 household spaces. Because of shared dwellings, the number of household spaces is around 400 (i.e. 600 – 200) higher than the number of dwellings. The number of **occupied** household spaces equates to the number of households.
- 3.7 The vacancy rate for dwellings in Glasgow fell from 3.6% in 2001 to 2.6% in 2011. Table 3.1 shows that this equates to a reduction in the number of vacant household spaces by almost 2,500.

Table 3.1 - Changes in Dwelling stock and Household spaces in Glasgow 2001-2011

	2001	2011	2001-2011
All dwellings	281,778	293,446	11,668
All household spaces	282,182	293,876	11,694
Occupied household spaces	271,596	285,693	14,097
Unoccupied household spaces	10,586	8,183	-2,403
Second residences/holiday accomm.	506	570	64
Vacant household spaces	10,080	7,613	-2,467

Source: NRS - 2001 and 2011 Census - Crown Copyright Reserved

- 3.8 Table A4 (in Appendix) gives information on vacancy rate by neighbourhood. In 2011, the vacancy rate is highest in some regeneration areas: Toryglen (7.9%), Ibrox/Kingston (5.4%), Haghill/ Carntyne (4.6%), Sighthill/Roystonhill (4.5%) and Pollokshaws/Mansewood (4.4%). Vacancy rates are also high in the City Centre/Merchant City (4.5%) and Yorkhill/Anderston (4.4%).

Dwelling Type and Size

- 3.9 The majority of dwellings in Glasgow are flats (71.3% of household spaces). Houses or bungalows make up only 28.4% of household spaces. In Scotland 36.4% of household spaces are flats and 63.4% of household spaces are houses or bungalows (see Appendix, Table A2).
- 3.10 Housing in Glasgow is smaller with, on average, only 4.2 rooms per household space. This compares with 5.0 rooms per household space for Scotland. Table A3 in the Appendix gives a breakdown of occupied household spaces by number of rooms.
- 3.11 The highest concentrations of flatted accommodation are in areas around the City Centre, West End, Shawlands and Springburn. Detached, semi-detached and terraced housing is more prevalent in Robroyston, Baillieston, Carmunnock, Newlands, parts of Greater Pollok and Blairdardie. In most of the latter areas dwellings tend to be larger with more rooms per household space (see Appendix, Table A5).

Population and Household Change

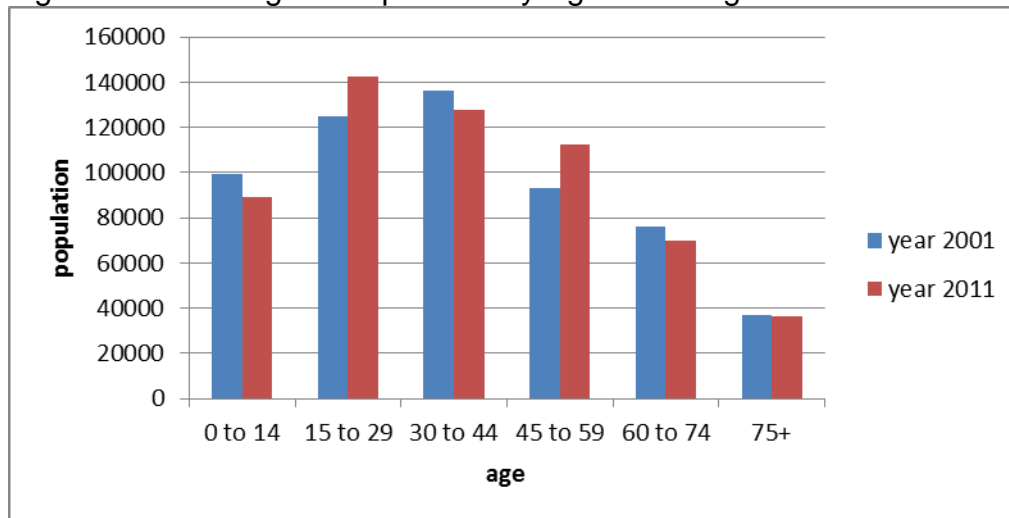

Table 3.2 - Changes in Population by Residence Type for Glasgow and Scotland in 2001-2011

	2001	2011	change	% change
Glasgow				
total population	577,869	593,245	15,376	2.7%
in households	565,974	578,251	12,277	2.2%
in communal establishments	11,895	14,994	3,099	26.1%
Scotland				
total population	5,062,011	5,295,403	233,392	4.6%
in households	4,976,005	5,196,386	220,381	4.4%
in communal establishments	86,006	99,017	13,011	15.1%

Source: NRS - 2001 and 2011 Census - Crown Copyright Reserved

- 3.12 Between 2001 and 2011 Glasgow's total population rose by 15,400, or 2.7% (see Table 3.2). The rise consists of a rise by 2.2% for the population in households and a rise of 26.1% for the communal establishment population (e.g. population in student halls of residence, care homes, etc.). The rate of growth for the total population in Glasgow (at 2.7%) is less than the Scottish average (at 4.6%).
- 3.13 Between 2001 and 2011 Glasgow's population in households rose by 12,300. There was, however, a fall in the number of children (age 0-14: -9,900), the younger middle-aged (age 30-44: -8,000) and the elderly (age 60+: -7,000). There were sizable increases for the age groups 15-29 (+17,800) and 45-59 (+19,400, see next page, Figure 3.2).
- 3.14 The main difference with Scotland in terms of changes in the age profile of the population is that in Glasgow the number of elderly (age 60+) fell by 7,000 (or -6.2%) and in Scotland the number of elderly rose by 163,400 (or +15.9%).

Figure 3.2 – Change in Population by Age for Glasgow in 2001-2011

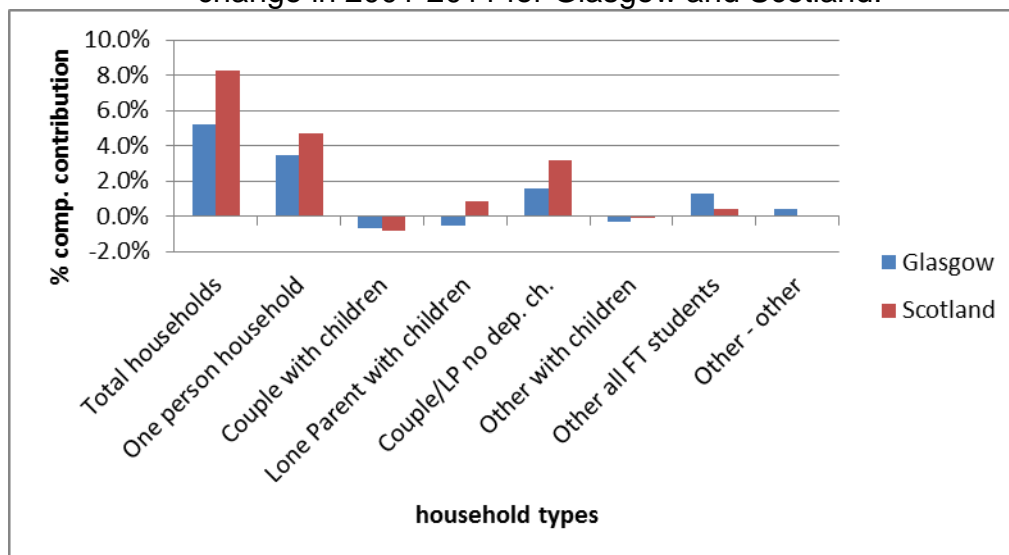

Source: NRS – 2001 and 2011 Census - Crown Copyright

3.15 Between 2001 and 2011 the number of households rose by 5.2% in Glasgow and by 8.2% in Scotland. Figure 3.3 (see below) shows how this change can be accounted for in terms of changes in the numbers for the various household types. The graph shows the component contribution of the different household types to the total household change. The sum of the component contributions equals the percentage total household change.

3.16 The rise in the number of households in Glasgow is mainly due to a rise in one person households, couple/lone parent households without dependent children and all-student households. In Scotland the main contributors to the rise in the number of households are one person households, couple/lone parent households without dependent children and lone parent families. The number of lone parent families fell in Glasgow by 1,400.

Figure 3.3 - Component contribution of household types to total household change in 2001-2011 for Glasgow and Scotland.

Source: NRS – 2001 and 2011 Census - Crown Copyright

Tenure Profile and Tenure Change

- 3.17 Table 3.3 gives the tenure split for households in Glasgow in 2011. 45.6% of Glasgow's households are in owner occupied, 17.7% are in private rented and 36.7% are in social rented accommodation. For comparison: in Scotland the owner occupied sector is considerably larger (at 62.0%) and, correspondingly, the private rented and social rented sectors are smaller (at respectively 13.7% and 24.3% of Scotland's households).
- 3.18 Glasgow's 56 neighbourhoods have been allocated to five groupings, based on their tenure profile, using cluster analysis. Map 2 below shows the groupings of neighbourhoods identified and Table 3.3 gives the tenure split for these five groupings.

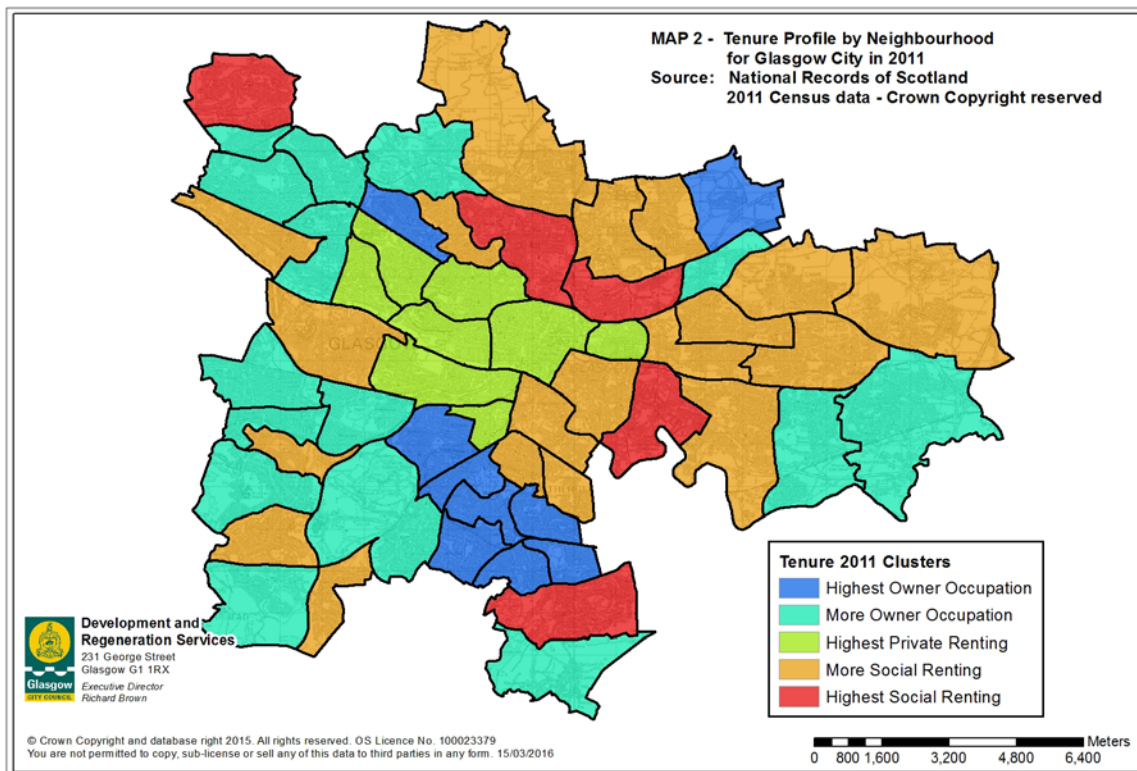

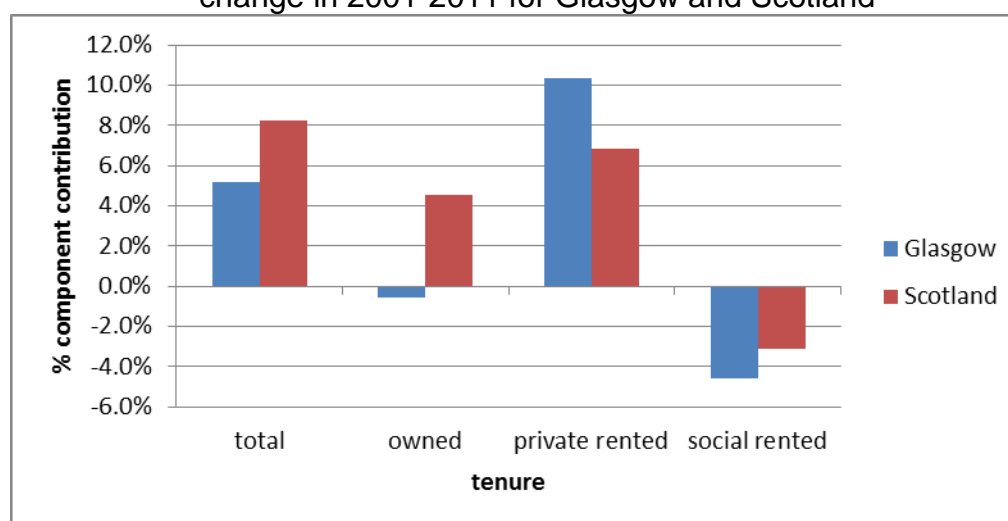

Table 3.3 - Tenure split for Tenure 2011 Clusters Glasgow Neighbourhoods

Tenure 2011 clusters	owned	private rented	social rented	total
Highest owner occupation	72.1%	22.1%	5.9%	100.0%
Higher owner occupation	60.5%	9.8%	29.8%	100.0%
Highest private renting	39.3%	37.0%	23.7%	100.0%
Higher social renting	35.8%	13.8%	50.4%	100.0%
Highest social renting	21.3%	7.0%	71.7%	100.0%
Glasgow City	45.6%	17.7%	36.7%	100.0%

Source: NRS - 2011 Census - Crown Copyright Reserved

- 3.19 Map 2 shows that owner occupation is the main tenure for areas around Shawlands, King's Park and Newlands, as well as Kelvindale/Kelvinside and Robroyston. There are higher levels of private renting in City Centre, Westend and Ibrox/Kingston/Pollokshields East areas. Social renting is the main tenure for Drumchapel, Ruchill/Possilpark, Sighthill/Roystonhill/Germiston, Parkhead/Dalmarnock and Castlemilk (see also Appendix, Table A9).
- 3.20 In Glasgow the owner occupied sector had a marginal fall in 2001-2011 and the private rented sector increased at a rate considerably above the Scotland average. The impact of the social rented sector reduction was greater in Glasgow, as compared with the rest of Scotland (see Figure 3.4).

Figure 3.4 - Component contribution of household tenures to total household change in 2001-2011 for Glasgow and Scotland

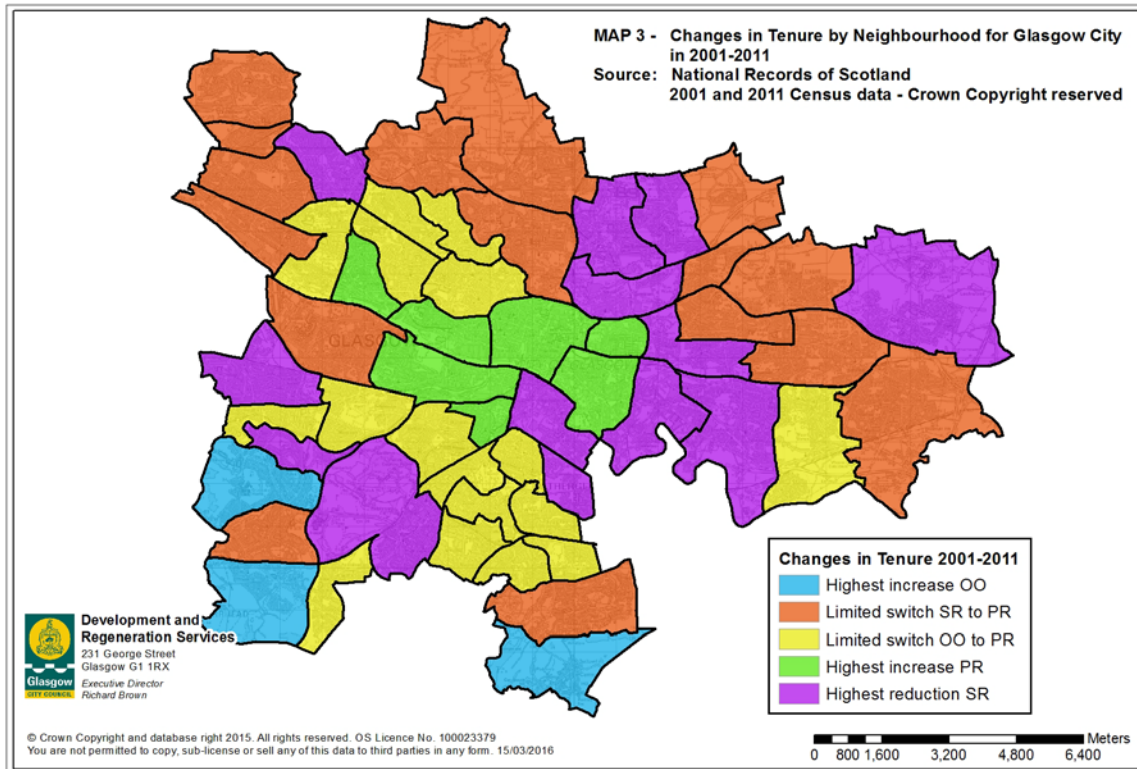

Source: NRS – 2001 and 2011 Census - Crown Copyright

- 3.21 Glasgow's 56 neighbourhoods have been allocated, using cluster analysis, to five groupings, based on the **changes** in their tenure profile in 2001-2011. Map 3 (see next page) shows the groupings of neighbourhoods identified and Table 3.4 below shows the component contribution of the various tenures to the total household change in 2001-2011. Again the component contributions add-up to the percentage total household change.

Change in Tenure 2001-2011 clusters	% total household change	component contribution 2001-2011		
		owned	private rented	social rented
Highest increase Owner Occupation	21.7%	17.5%	8.0%	-3.8%
Limited switch Social to Private Renting	4.2%	2.8%	5.4%	-4.0%
Limited switch Owner Occ. to Private Renting	3.3%	-5.2%	9.5%	-1.0%
Highest increase Private Renting	21.4%	-1.6%	27.0%	-4.0%
Highest reduction Social Renting	-2.4%	0.0%	8.1%	-10.5%
Glasgow City	5.2%	-0.6%	10.3%	-4.6%

Source: NRS - 2001 and 2011 Census - Crown Copyright Reserved

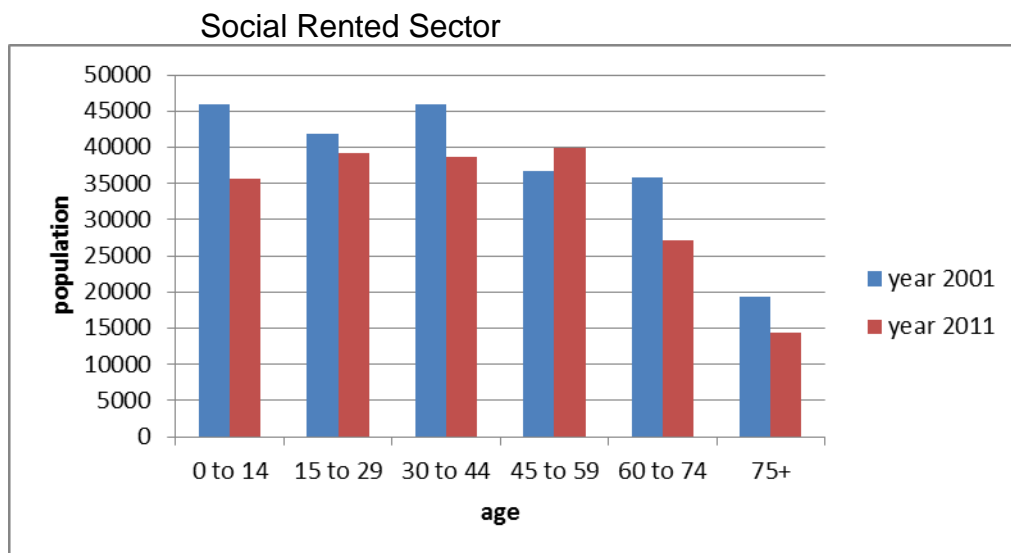

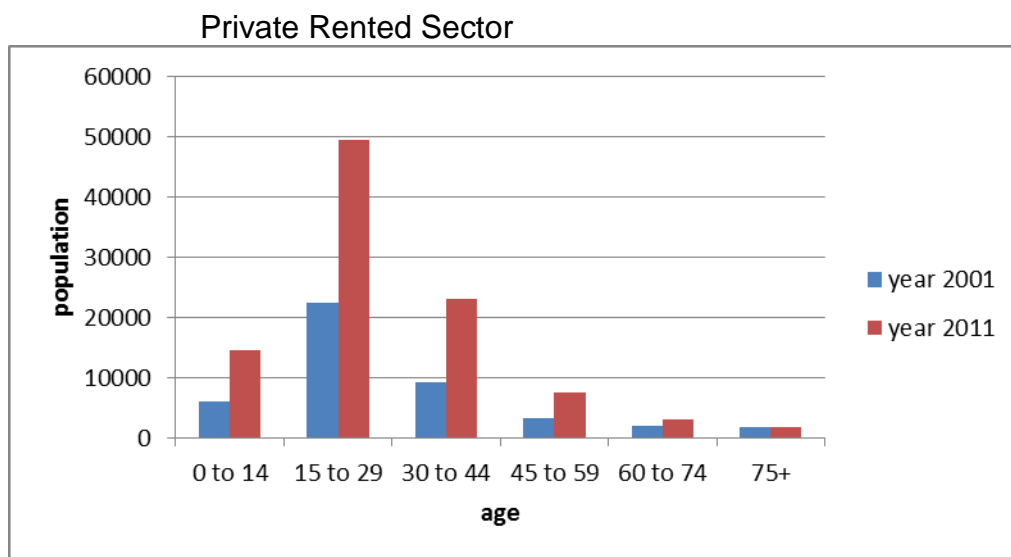

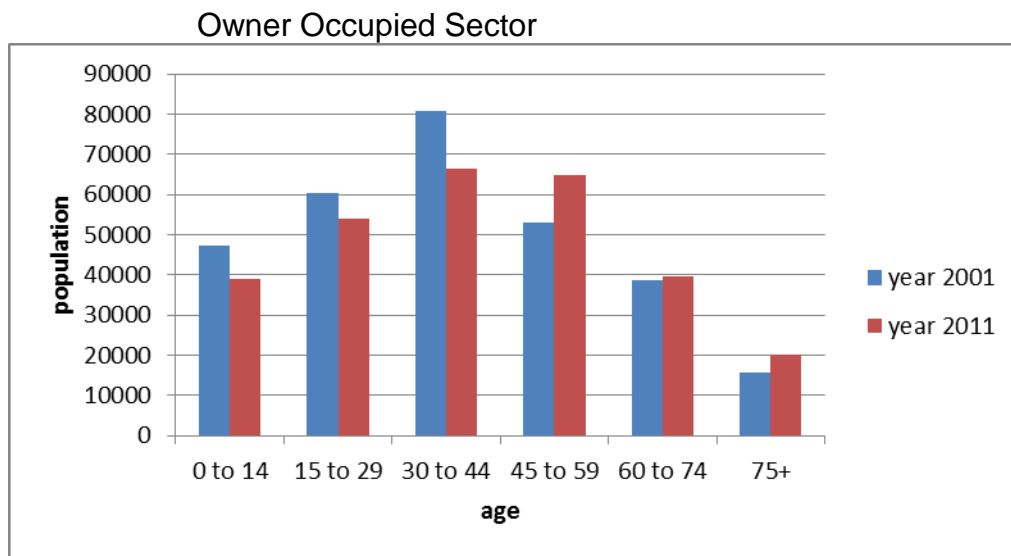

3.22 In three neighbourhoods, Pollok, South Nitshill/Darnley and Carmunnock, owner occupation has risen mainly through newbuild (blue colour in Map 3). Some neighbourhoods around the City Centre, from Broomhill and Ibrox in the West to Calton and Dennistoun in the East, have seen sizable increases in their private rented housing (green colour in Map 3). Several neighbourhoods across the City have been affected by demolition programmes: Sighthill, Springburn, Balornock/Barmulloch, Easterhouse, Parkhead/Dalmarnock, Greater Gorbals, Toryglen, Pollokshaws, Corkerhill, Penilee and Temple/Anniesland (purple colour in Map 3).

3.23 In some neighbourhoods with more owner occupation there has been a shift from owner occupation to private renting (yellow colour in Map 3). In other neighbourhoods, generally with more social rented housing, there has been a shift from social renting to private renting (brown colour in Map 3). In some of these neighbourhoods, owner occupation has increased also (see Appendix, Table A10).

Tenure and Age of Population

3.24 Figure 3.5 (see next page) shows the changes in the age composition for each of the populations who live in the three housing tenures in Glasgow. This shows a different pattern of tenure change for the age group under 45 and age 45+. For the age group under 45 there was an expansion of private renting at the expense of both the owner occupied and social rented sectors. For the age group 45+ there was an expansion of owner occupation, at the expense of the social rented sector.

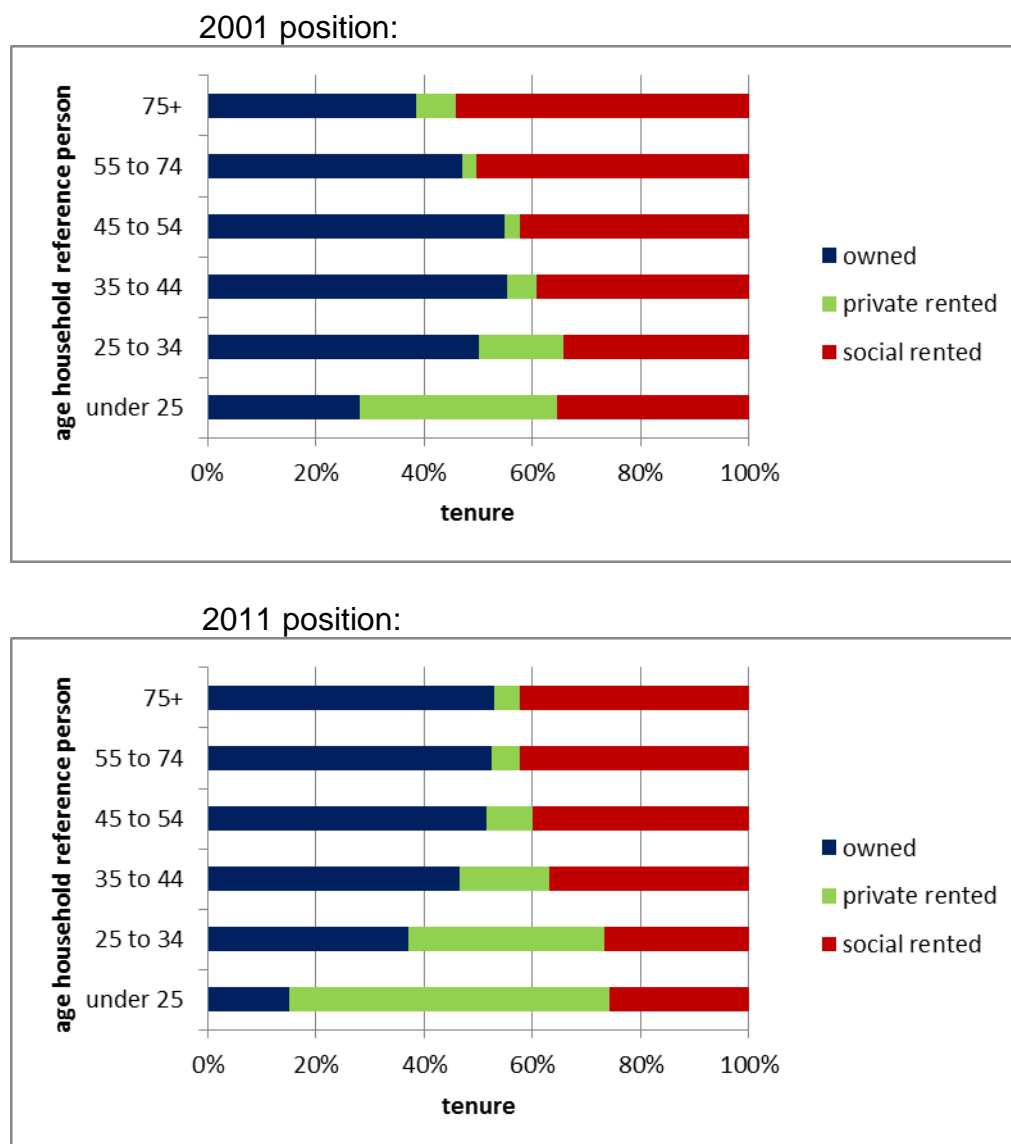

Figure 3.5 – Population in Glasgow by Age/Tenure - changes 2001-2011

Source: NRS – 2001 and 2011 Census - Crown Copyright

3.25 This same pattern is also clear from Figure 3.6, which compares the age and tenure profile for household reference persons (HRPs) in Glasgow in 2001 and 2011 (HRP - a kind of household-representative who is selected based on economic status and age). In that period the share of owner occupiers among the group age 55+ has increased and the share of social renters has reduced. Among the younger age cohorts (under age 45) there has been a reduction in the share for both owner occupiers and social renters and a significant increase in the share of private renters.

Figure 3.6 – Household Reference Persons in Glasgow by Age and Tenure

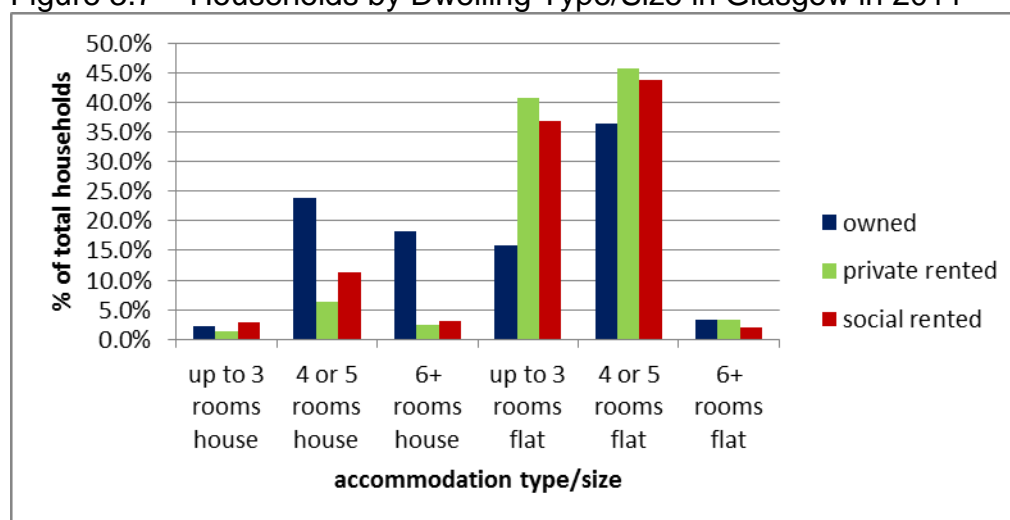

Source: NRS – 2001 and 2011 Census - Crown Copyright

3.26 Figure 3.5 (see previous page) shows that there was a sizable rise in the number of children (age 0 to 14) in the private rented sector (by 8,600, or 143.9%). There were large falls in the number of children for the social rented (by -10,300, or -22.4%) and owner occupied sectors (by -8,100, or -17.2%).

Tenure and Dwelling Type/Size

3.27 The dwelling type and size profile is very similar for the private rented and social rented sectors in Glasgow. The profile for the owner occupied sector is different with relatively more and larger houses (see Figure 3.7).

Figure 3.7 – Households by Dwelling Type/Size in Glasgow in 2011

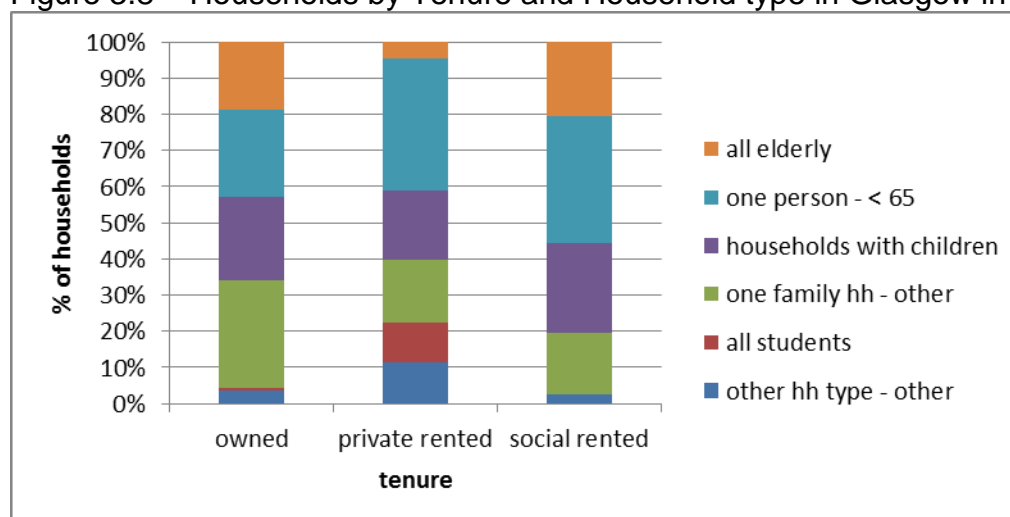

Source: NRS – 2011 Census – Crown Copyright Reserved

Tenure and Household Type/Size

3.28 Owner occupied households have fewer one person households and private rented households have more other household types and all student households and fewer all-elderly households (see Figure 3.8).

Figure 3.8 – Households by Tenure and Household type in Glasgow in 2011

Source: NRS – 2011 Census – Crown Copyright Reserved

3.29 Compared to Scotland, Glasgow has a higher proportion of one person households (age <65) and of other (i.e. not one-family) household types, including all-student households. Glasgow's proportion is lower for all-elderly households, family households and couple households without children or with all children non-dependent.

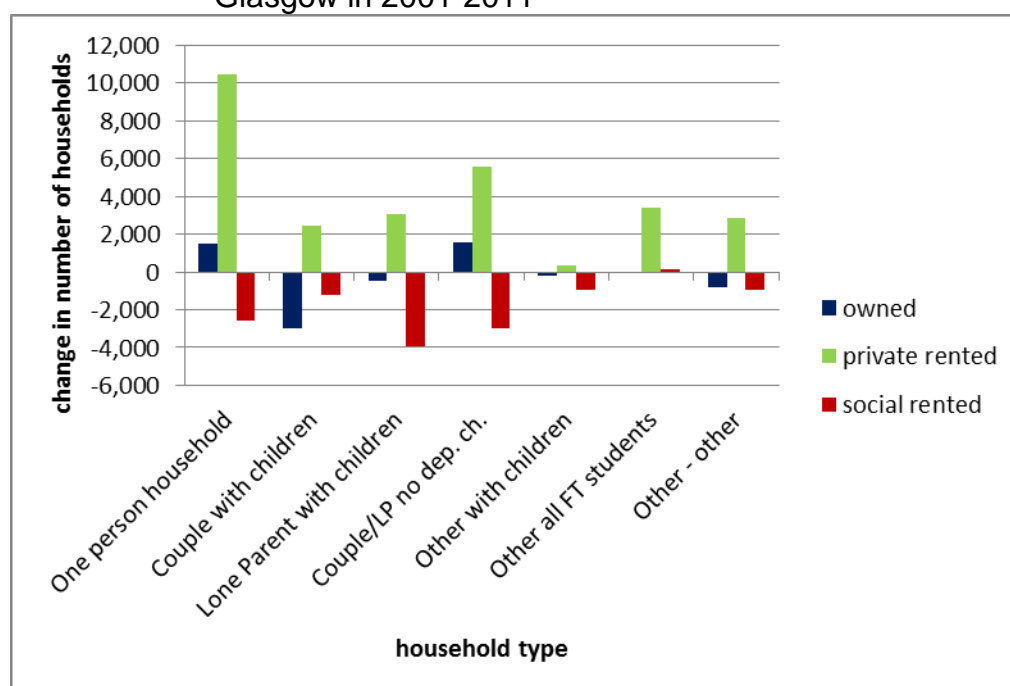

3.30 Households who live in houses tend to be larger than households who live in flats (see Table 3.5). Owner occupied households, with relatively fewer one person households and who are more likely to live in houses (see Figure 3.7) show a larger average household size than the other tenures in Glasgow.

Accommodation type	Total	Owned	Private rent	Social rent
Total	2.02	2.18	1.95	1.86
Whole house or bungalow	2.56	2.62	2.57	2.38
Flat, maisonette or apartment	1.81	1.84	1.88	1.75

Source: NRS - 2011 Census - Crown Copyright Reserved

3.31 Figure 3.9 shows, for Glasgow in 2001-2011, the changes in the number of households by type. One person households in the private rented sector rose by 10,500. The number of "couple with children" households fell by 3,000 in the owner occupied sector and rose by 2,400 among private renters. The number of "lone parent with children" households rose by 3,000 in the private rented sector and fell by 3,900 in social renting. Student households have contributed 3,400 to the rise in private rented households in Glasgow.

Figure 3.9 – Changes in Households by Tenure and Household Type in Glasgow in 2001-2011

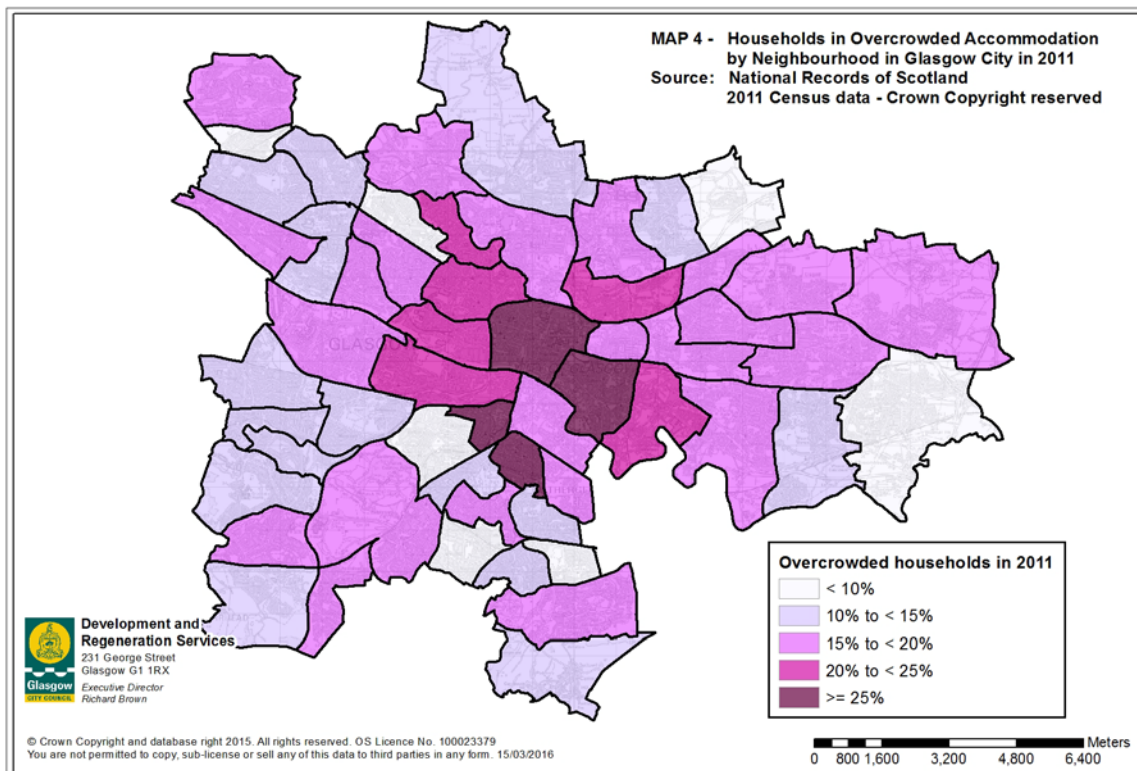

Source: NRS – 2001 and 2011 Census – Crown Copyright Reserved

- 3.32 The changes in households by type in 2001-2011 can also be looked at spatially, in relation to the tenure profile of the neighbourhood (see Map 2). In “highest owner-occupation” areas there has been a reduction in couples with children and an increase in couple/lone parents without dependent children. In “higher owner-occupation” areas couple families have reduced but lone parent families have increased. “Highest private renting” areas have seen a fall in the number of lone parent families and an increase in the number of student and other (not one-family) household types. In “more social rented” areas family households (of all types) have reduced and single person households have increased. In “highest social rented” areas, the biggest fall has been in the number of lone parent families (see Appendix, Tables A11 to A13).

Overcrowding

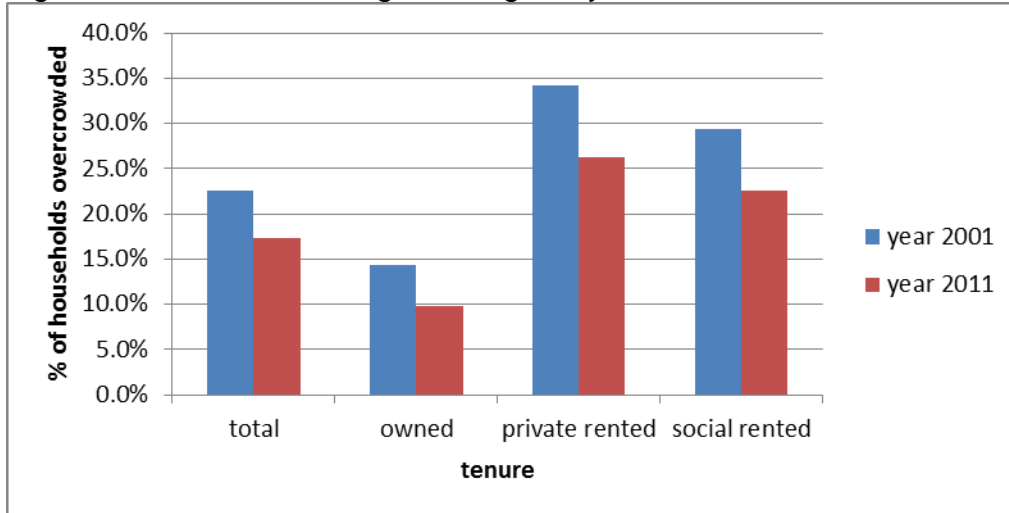

- 3.33 The percentage of households in Glasgow which are overcrowded has reduced from 22.5% in 2001 to 17.4% in 2011. Some of this reduction may be due to a change in the Census question on the number of rooms. In 2011 the rate of overcrowding is still almost twice the Scottish average (at 9.0%).
- 3.34 Map 4 (see below) shows that neighbourhoods in and around the City Centre have higher rates of overcrowding, with the highest rates (over 25%) in City Centre/Merchant City, Calton/Bridgeton, Govanhill and Pollokshields East (see Appendix, Table A5). In the decade 2001-2011 overcrowding has reduced most in Glasgow’s more deprived areas: Drumchapel (from 27.7% to 18.3%), Easterhouse (from 32.6% to 20.0%), Ruchazie/Garthamlock (from 26.0% to 16.0%), Parkhead/Dalmarnock (from 31.9% to 22.2%), Ruchill/Possilpark (from 31.5% to 19.7%), and Castlemilk (from 26.3% to 16.2%).

Overcrowding and Tenure

3.35 The rate of overcrowding is lowest among owner occupiers (at 9.8%) and is higher in the private rented sector (at 26.2%) and the social rented sector (at 22.6%, see Figure 3.10).

Figure 3.10 - Overcrowding in Glasgow by Tenure in 2001 and 2011

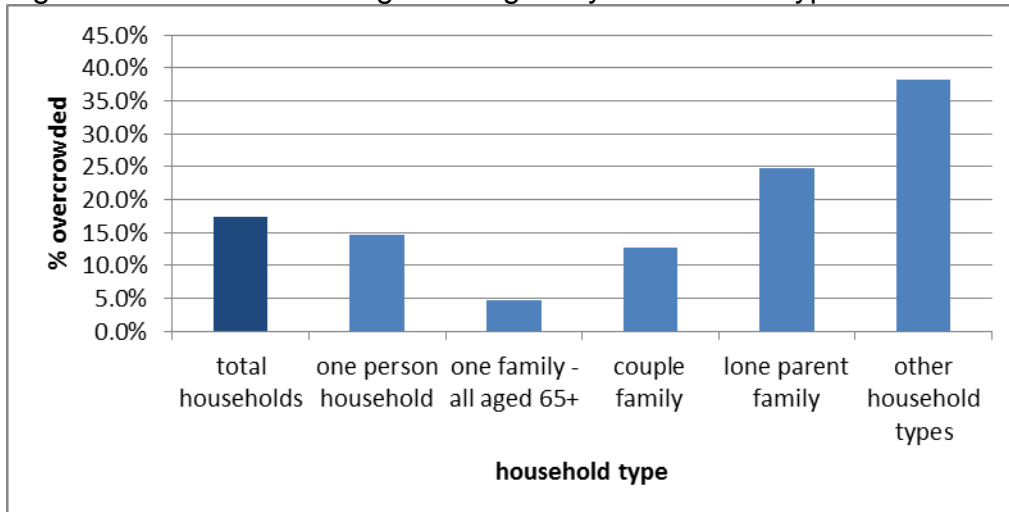

Source: NRS – 2001 and 2011 Census – Crown Copyright Reserved

Overcrowding and Household Type

3.36 The rate of overcrowding is higher than the City average (17.4%) for lone parent families (at 24.8%) and other household types, including all student households, (at 38.3%, see Figure 3.11).

Figure 3.11 - Overcrowding in Glasgow by Household Type in 2011

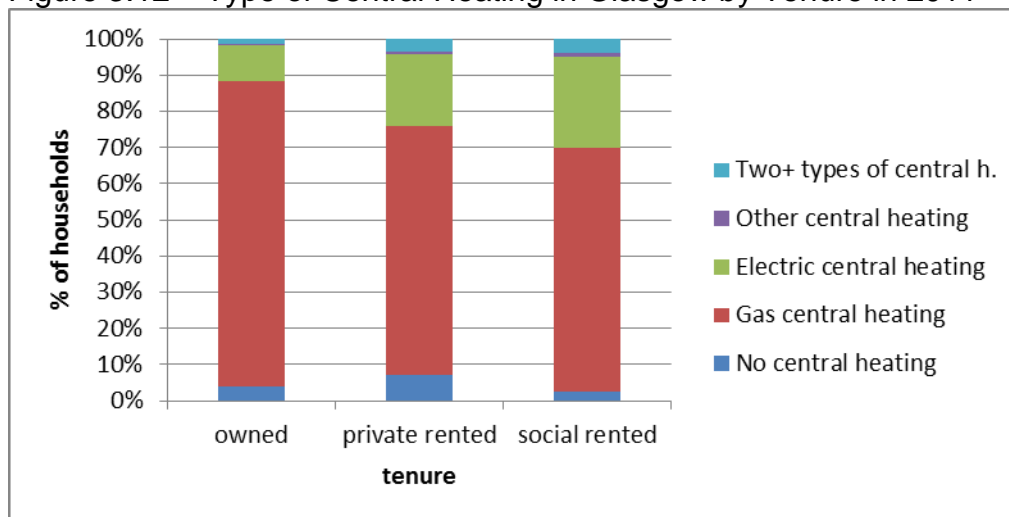

Source: NRS – 2011 Census – Crown Copyright Reserved

Central Heating and Tenure

- 3.37 In 2011, 4.0% of households in Glasgow are without central heating. The comparable figure is 2.3% for Scotland.
- 3.38 There is a concentration of areas with a higher rate of no-central-heating in and around the City Centre (see Appendix, Table A24). The highest rates are in: City Centre/Merchant City (7.9%), Govanhill (7.8%), Maryhill Road Corridor (6.9%), Langside/Battlefield (6.6%), Ibrox/Kingston (6.2%) and Yorkhill/Anderston (6.0%).
- 3.39 Private rented households in Glasgow show the highest rate of “no central heating”, at 7.2% (see Figure 3.12).

Figure 3.12 – Type of Central Heating in Glasgow by Tenure in 2011

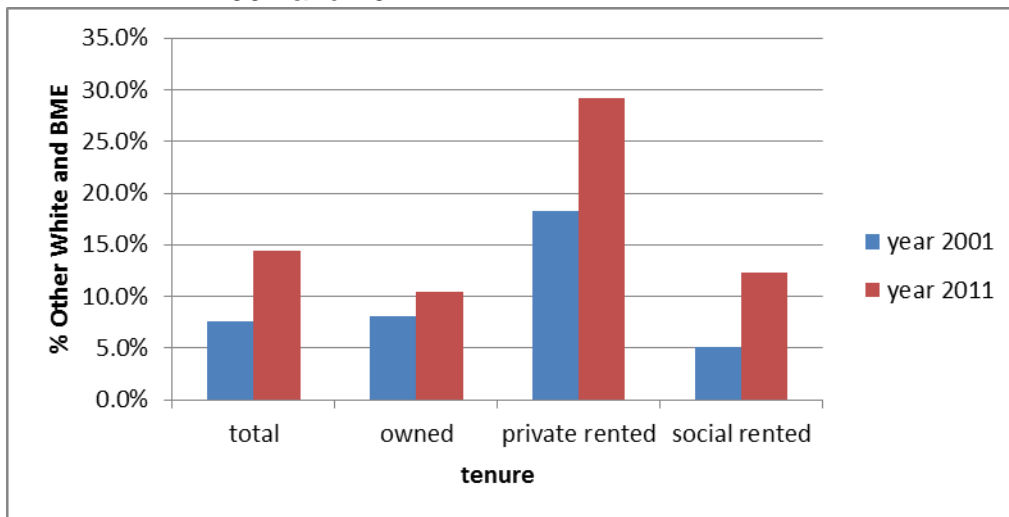

Source: NRS – 2011 Census – Crown Copyright Reserved

- 3.40 Rates of gas central heating are highest in owner occupied households (84.2%, see Figure 3.12). 17.3% of Glasgow households have electric central heating. This form of heating is more common for private rented households (19.9%) and social rented households (25.3%).
- 3.41 17.3% of Glasgow households have electric central heating. There is a concentration of areas with a higher rate of electric-central-heating in and around the City Centre (see Appendix, Table A24). The highest rates are in: City Centre/Merchant City (47.2%), Sighthill/Roystonhill (43.3%), Springburn (35.6%), Calton/Bridgeton (33.9%), Pollokshaws (31.6%), Ibrox/Kingston (31.3%), Blairdardie (30.9%), North Maryhill/Summerston (30.8%) and Maryhill Road Corridor (30.4%).

Tenure and Ethnicity

- 3.42 The percentage of “Other White and BME” households has increased in Glasgow from 7.7% in 2001 to 14.4% in 2011. This has had the biggest impact on the private rented and social rented sectors (see Figure 3.13).

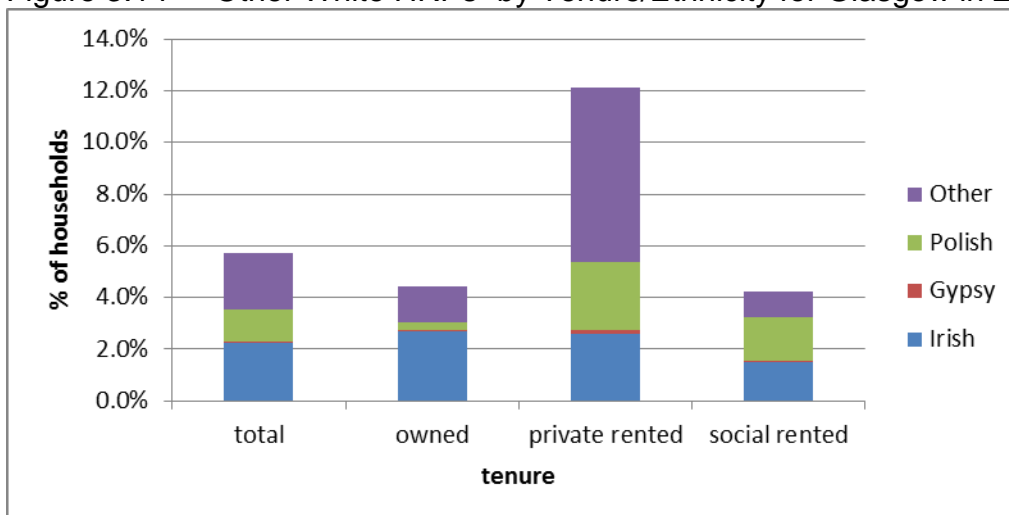

Figure 3.13 – “Other White and BME” Households by Tenure for Glasgow in 2001 and 2011

Source: NRS – 2001 and 2011 Census – Crown Copyright Reserved

- 3.43 5.7% of households in Glasgow have a household reference person (HRP) with an “Other White” ethnicity. The rate for private rented households is just over twice the City rate (at 12.1%, see Figure 3.14).

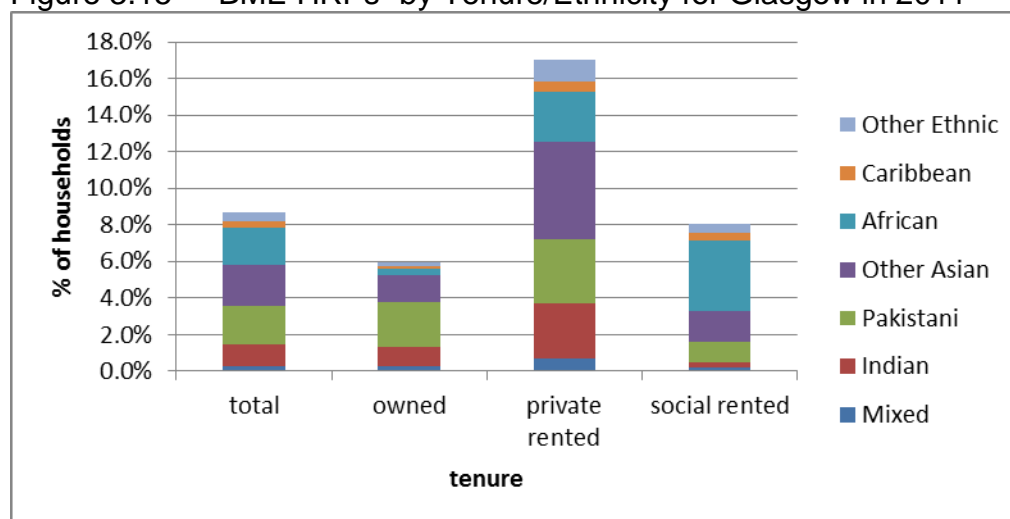

Figure 3.14 – “Other White HRP” by Tenure/Ethnicity for Glasgow in 2011

Source: NRS – 2011 Census – Crown Copyright Reserved

- 3.44 8.7% of households in Glasgow have a household reference person (HRP) with a BME ethnicity. The rate for private rented households is almost twice the City rate (at 17.0%, see Figure 3.15).

Figure 3.15 – “BME HRPs” by Tenure/Ethnicity for Glasgow in 2011

Limiting Long Term Illness and General Health

- 3.45 The 2011 Census asked questions on general health, limiting long term illness (LLTI) and long term health conditions. Table 3.6 shows that, as expected, the general health and LLTI results are closely related: 96.3% of people with bad or very bad health are limited in their day-to-day activities and 93.5% of people with very good or good health are **not** limited in their day-to-day activities.

General health	Total	Day-to-day activities	
		limited	not limited
Total	578,251	129,265	448,986
Very good or good health	449,407	29,306	420,101
Fair health	78,814	51,772	27,042
Bad or very bad health	50,030	48,187	1,843
Total	100.0%	22.4%	77.6%
Very good or good health	100.0%	6.5%	93.5%
Fair health	100.0%	65.7%	34.3%
Bad or very bad health	100.0%	96.3%	3.7%

Source: NRS - 2011 Census - Crown Copyright Reserved

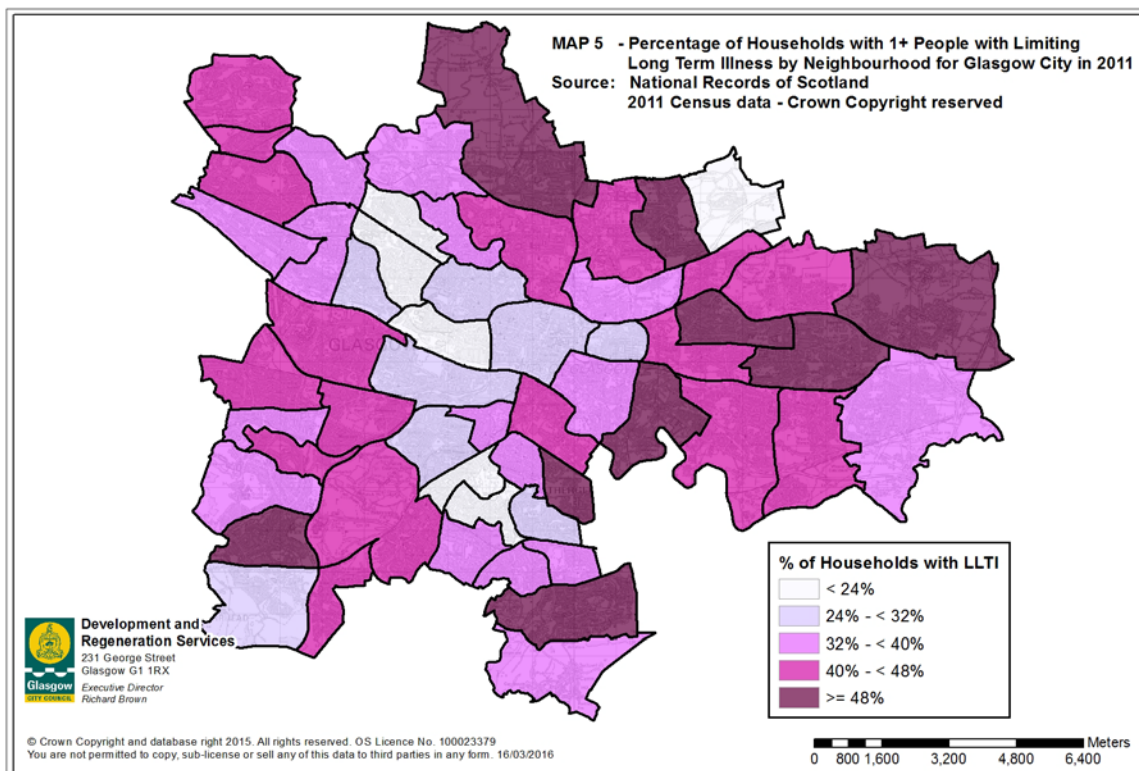

3.46 Glasgow’s population has a worse state of health than the Scotland average. 22.4% of the population in Glasgow has an illness or disability which limits their day-to-day activities (Scotland: 19.2%). 8.7% of Glasgow residents classify their health as “bad or very bad” (Scotland: 5.5%).

Limiting Long Term Illness in Households

3.47 37.5% of households in Glasgow have at least 1 member with a limiting long term illness (Scotland: 34.7%). Table A28 (see Appendix) shows that households with elderly people are more likely to contain a member with a limiting long term illness (LLTI).

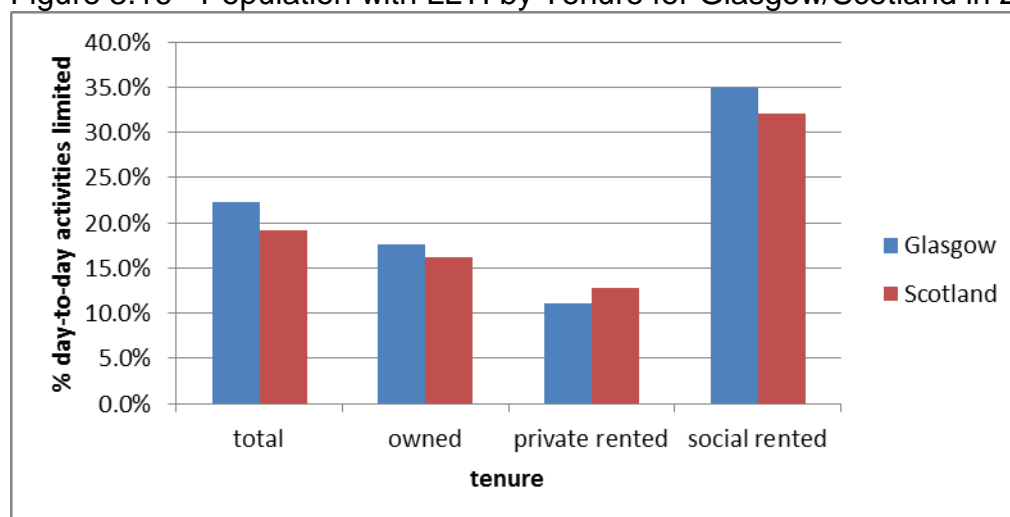

3.48 The percentage of households which include one or more people with a LLTI varies considerably across the City (see Map 5 below and Appendix, Table A27). Some deprived areas have a rate of over 50%: Lambhill/Milton, Balornock/Barmulloch, Riddrie/Cranhill, Springboig/Barlanark, Parkhead/Dalmarnock, Castlemilk and Priesthill/Househillwood.

3.49 Some City Centre areas (with a younger population) and more prosperous areas have a rate under 25%: Kelvindale/Kelvinside, Hyndland/Dowanhill, Broomhill/Partick West, Yorkhill/Anderston, Hillhead/Woodlands, Robroyston/Millerston, Shawlands/Strathbungo and Langside/Battlefield.

Health and Tenure

Figure 3.16 - Population with LLTI by Tenure for Glasgow/Scotland in 2011

Source: NRS - 2011 Census - Crown Copyright Reserved

- 3.50 As noted before, long term illness or disability rates are higher in Glasgow (22.4% of the population) than in Scotland (19.2% of the population, see Figure 3.16). The rates are highest for the social rented sector (Glasgow: 35.0% of the population and Scotland: 32.1% of the population).
- 3.51 Long term illness rates are closely related to age. Figure 3.16 shows that the private rented sector has the lowest rates. This does not necessarily mean that people in private rented housing are healthier. More detailed analysis shows that the lower figures reflect the younger age profile of the population in that sector.
- 3.52 The impact of the age profile of the population by tenure is taken into account in Figure 3.17 (see next page). National LLTI rates by age have been applied to populations by age for the various tenures. That gives “expected values” which can then be compared with “actual values”. Figure 3.17 shows that, under national LLTI rates by age, Glasgow’s population would have had an overall LLTI rate of 17.3%. The actual rate is almost 30% higher, at 22.4%.
- 3.53 The younger age profile for the private rented sector results in an expected LLTI rate of 10.3%. The actual rate is 8% **higher**, at 11.1%. The older age profile for the owner occupied sector gives an expected LLTI rate of 18.9%. The actual rate is 7% **lower** at 17.6%.
- 3.54 The health for residents in Glasgow’s social rented sector is considerably worse than average. This is part of a national pattern. For social renters in Scotland the actual LLTI rate is, at 32.1%, just over 70% higher than the expected rate, at 18.8%. For social renters in Glasgow the actual LLTI rate is, at 35.0%, almost 90% above the expected rate, at 18.5% (see Figure 3.17).

Figure 3.17 - Population with LLTI by Tenure for Glasgow in 2011 - a comparison of expected (from national rates) and actual values

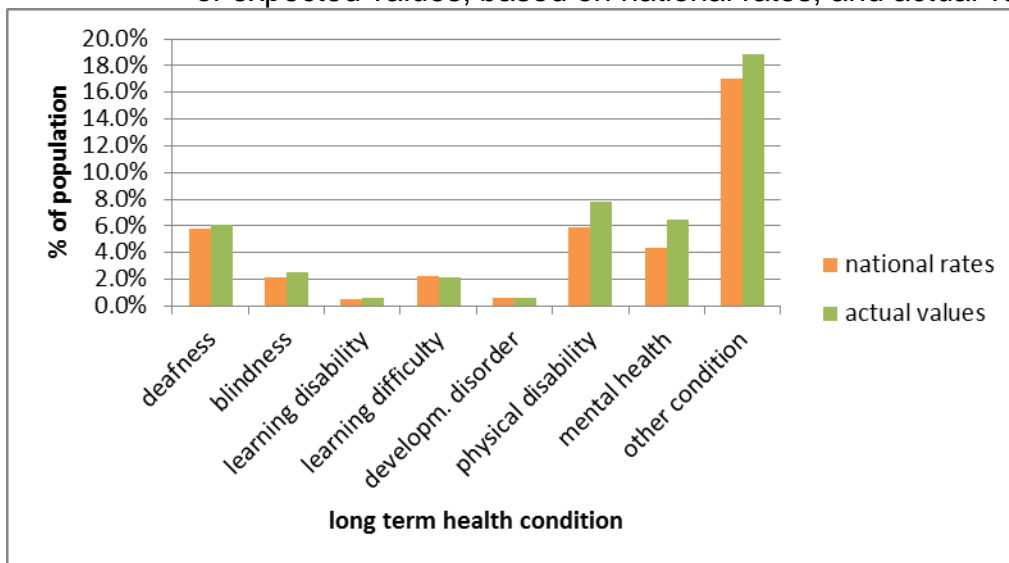

Source: NRS - 2011 Census - Crown Copyright Reserved

Long Term Health Conditions

3.55 The 2011 Census contained, for the first time, a question on health conditions. Given what was noted earlier with respect to a worse than average health profile for Glasgow residents, it is not surprising that actual rates are mostly higher than expected rates, based on national prevalence rates by age (see Figure 3.18 below).

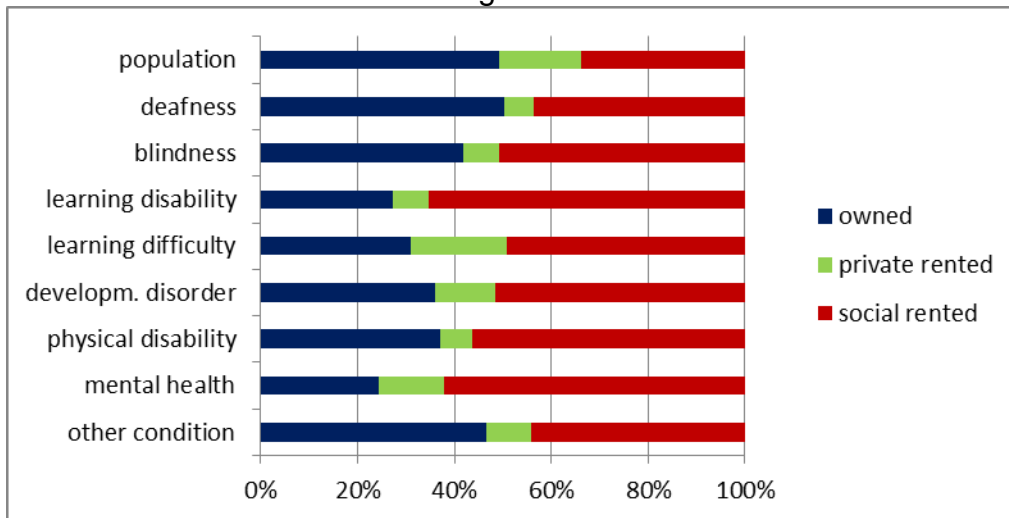

Figure 3.18 - Long term health conditions in Glasgow in 2011 - a comparison of expected values, based on national rates, and actual values

Source: NRS - 2011 Census - Crown Copyright Reserved

3.56 For Glasgow residents the largest differences, as compared with national rates, are for physical disability (32.2% higher), mental health condition (49.1% higher) and other condition (11.0% higher).

Figure 3.19 - Tenure split for population with different long term health conditions in Glasgow in 2011

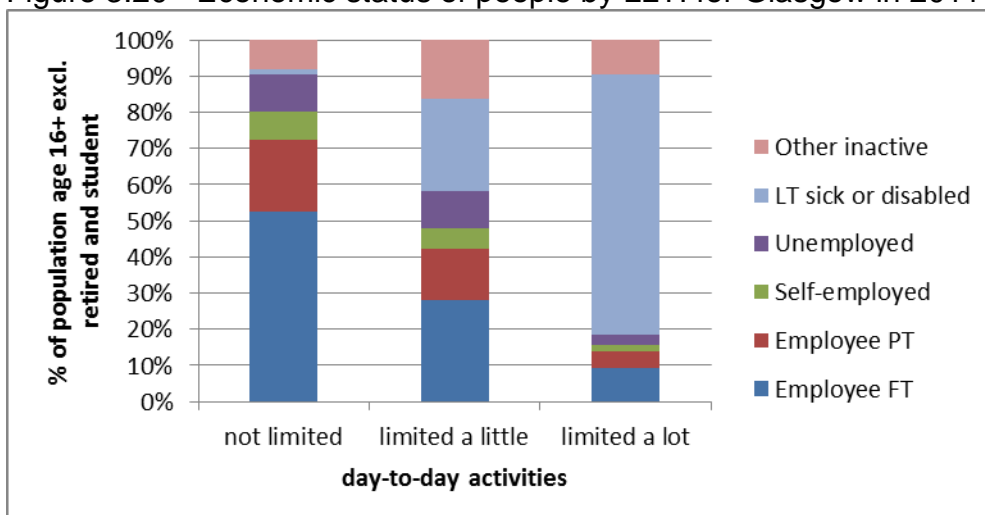

Source: NRS - 2011 Census - Crown Copyright Reserved

- 3.57 Figure 3.19 draws attention to the concentration of people with a long term health condition in the social rented sector. Although the sector accommodates only 33.7% of Glasgow's household population (see the top bar in Figure 3.19), 65.3% of people with a learning disability and 62.2% of people with a mental health condition live in that sector.

Limiting Long Term Illness or Disability and Economic Activity

- 3.58 Having a long term limiting illness or disability has an impact on employment rates. Figure 3.20 below enables examination of employment rates for all people age 16 and over who are not (economically inactive) students and who are not retired.

Figure 3.20 - Economic status of people by LLTI for Glasgow in 2011

Source: NRS - 2011 Census - Crown Copyright Reserved

3.59 Table 3.7 shows that for Glasgow’s population age 16+, not retired and not an economically inactive student, 70.6% are in employment. For those not limited in their day-to-day activities the rate is 80.2%. The rate reduces to 47.9% for those whose day-to-day activities are “limited a little” and to 15.7% for those whose day-to-day activities are “limited a lot” (see also Figure 3.20).

	Glasgow	Scotland	difference
total population age 16+			
not retired and not an economically inactive student	70.6%	79.4%	-8.8%
day-to-day activities			
not limited	80.2%	85.8%	-5.6%
limited a little	47.9%	60.6%	-12.7%
limited a lot	15.7%	22.5%	-6.8%

Source: NRS - 2011 Census - Crown Copyright Reserved

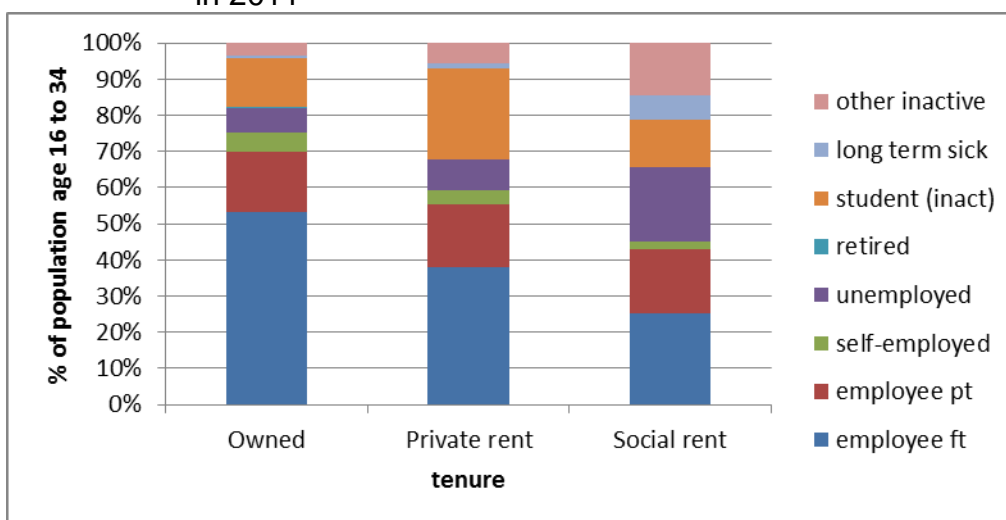

3.60 For Glasgow the percentage in employment is significantly below the Scottish average. The largest difference is for the group whose day-to-day activities are “limited a little” (-12.7%, see Table 3.7).

Tenure and Economic Status

3.61 The different age composition of the population in the various tenures will have an impact on the economic status distribution of the population by tenure. For example in the private rented sector, the high proportion of students and the low proportion of retired people are related to the younger age profile for that sector.

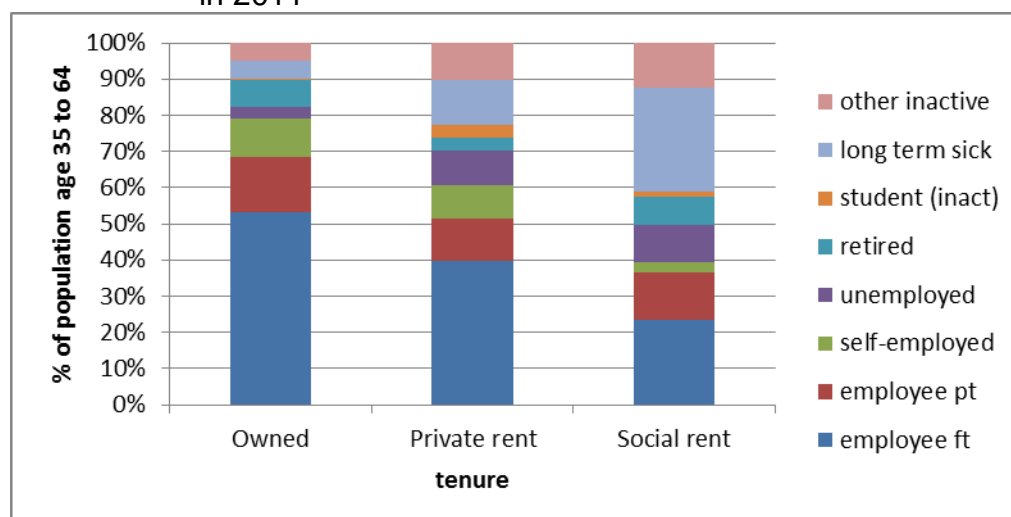

3.62 Figures 3.21 (see below) and 3.22 (see next page) give the economic status profiles by tenure for the age groups 16-34 and 35-64 separately.

Figure 3.21 - Population age 16-34 in Glasgow by tenure and economic status in 2011

Source: NRS - 2011 Census - Crown Copyright Reserved

Figure 3.22 - Population age 35-64 in Glasgow by tenure and economic status in 2011

Source: NRS - 2011 Census - Crown Copyright Reserved

- 3.63 Total employment rates by tenure for the two age groups are fairly similar. There are more part-timers among the younger and more self-employed among the older workers. The age group 16-34 has a high proportion of students, particularly in the private rented sector (25.2%). The age group 35-64 has a higher proportion of long term sick people, particularly in the social rented sector (29.0%).
- 3.64 Across the two age groups employment rates are highest for people in owner occupation (at 77.5%) and lowest for people in social rented accommodation (at 41.7%). Unemployment is particularly high (20.5%) for the 16-34 age group in social rented housing.
- 3.65 Table 3.8 considers changes over time in relation to the tenure profile of the neighbourhoods (see Map 2). The percentage of the people age 16-74 in Glasgow who are in employment has risen from 46.9% in 2001 to 52.7% in 2011. Table 3.8 indicates that this increase in employment has had a more than proportionate impact on the employment rate in areas with higher than average social rented housing (see Appendix, Tables A38 and A39).

Tenure 2011 clusters	2001	2011	change
Highest owner occupation	63.6%	65.8%	2.2%
Higher owner occupation	50.9%	57.1%	6.2%
Highest private renting	47.1%	49.5%	2.5%
Higher social renting	41.0%	48.5%	7.6%
Highest social renting	34.7%	44.5%	9.8%
Glasgow City	46.9%	52.7%	5.7%

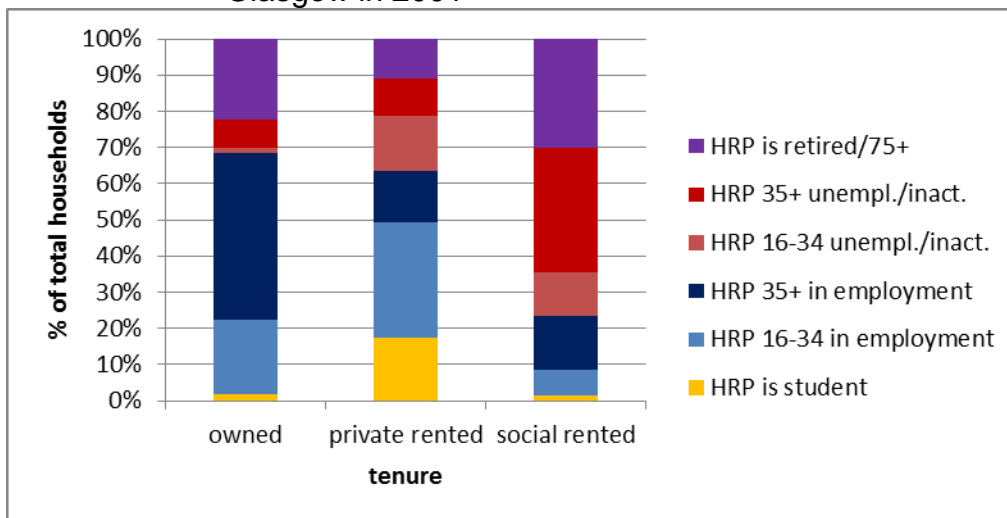

Source: NRS - 2001 and 2011 Census - Crown Copyright Reserved

Tenure and Economic Status of Household Reference Person

3.66 Households in the Census can be categorised by the characteristics of the household reference person (HRP). In this section, households by tenure are analysed in terms of the economic status of the HRP.

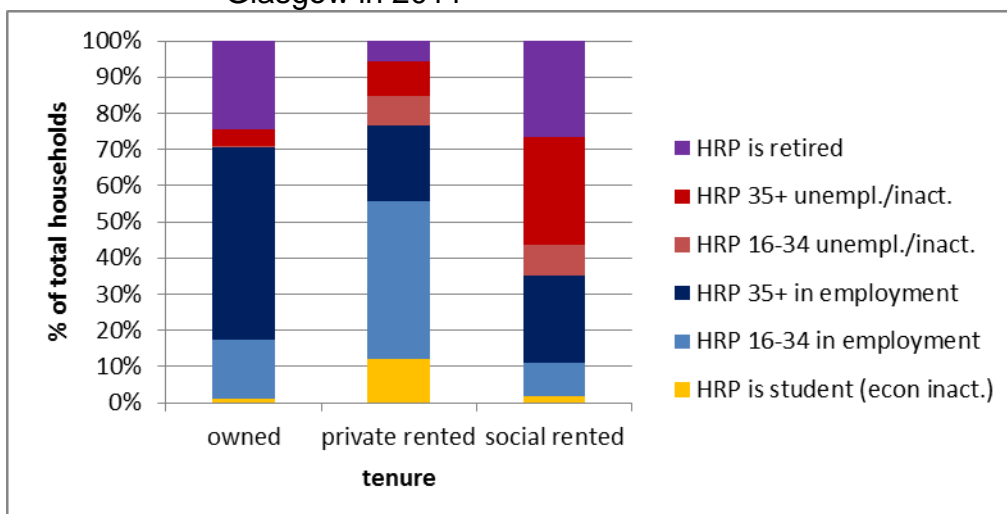

3.67 There are difficulties in comparing the economic status information from the 2001 and 2011 Censuses. Figures 3.23 and 3.24 give results that are roughly comparable.

Figure 3.23 – Households by age/economic status of HRP by tenure for Glasgow in 2001

Source: NRS - 2001 Census - Crown Copyright Reserved

Figure 3.24 – Households by age/economic status of HRP by tenure for Glasgow in 2011

Source: NRS - 2011 Census - Crown Copyright Reserved

- 3.68 In the owner occupied sector there has been, between 2001 and 2011, a rise in number of households with an older worker or retired HRP (purple colour in Figures 3.23 and 3.24). Numbers have reduced for households with a younger worker (light blue colour) or unemployed/inactive HRP (red colour).
- 3.69 The growth of the private rented sector has, to a large extent, been driven by a rise in households with a young adult HRP in employment (light blue colour). The share of households with an unemployed or inactive HRP (red colour) has reduced, although there has been a rise in absolute numbers.
- 3.70 Within social renting, households with an unemployed/inactive or retired HRP (red and purple colours) have reduced and households with a HRP in employment (blue colour) have increased. This is evidence (see also paragraph 3.65) that the rise of employment in Glasgow has resulted in an increase of the employment rate for people who live in social rented housing.

Students

- 3.71 Table 3.9 shows that about 8,000 (or 12.7%) of Glasgow's 63,000 full-time students live in a communal establishment and about 20,200 (or 32.0%) live with their parents.
- 3.72 59.4% of students who live with their parents are in owner occupation and 32.7% are in social rented housing.

Student living arrangements	total	owned	private rented	social rented
Student living alone	6,639	1,114	3,952	1,573
Living with parents in one family unit	18,640	10,988	1,504	6,148
Living with parents - other	1,523	981	103	439
In one family unit household with spouse, etc.	5,409	1,534	2,144	1,731
Living in all student household	18,327	2,433	15,194	700
Other household type	4,477	1,168	2,682	627
All full-time students living in households	55,015	18,218	25,579	11,218
Living in a communal establishment	7,989			
All full-time students aged 16+	63,004			

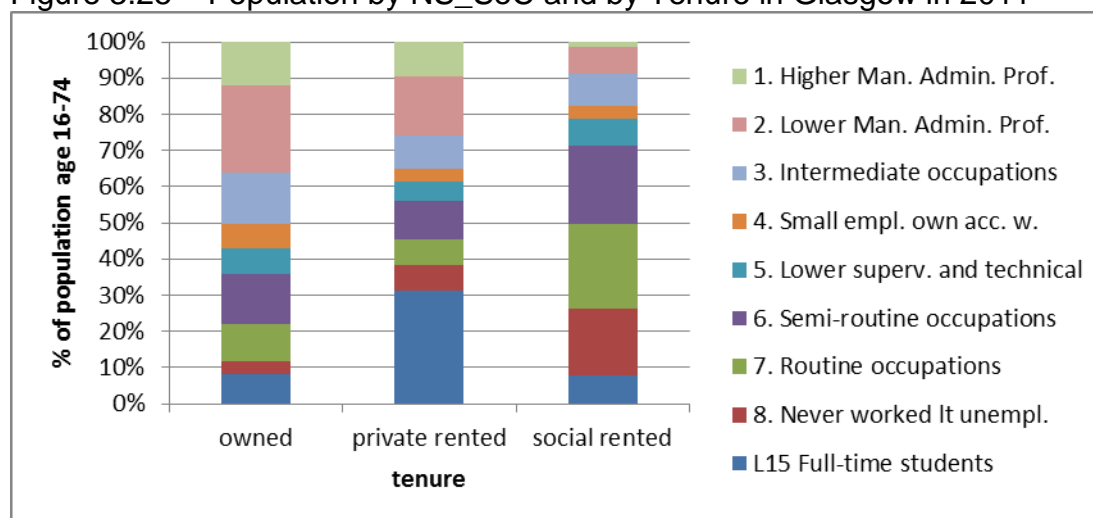

Source: NRS - 2011 Census - Crown Copyright Reserved

- 3.73 Around 18,300 students live in 6,700 all-student households. Most of these households (82.6%) are in the private rented sector.
- 3.74 Just over 6,600 students live in a single person household. 59.5% of these households are in private rented housing.

Tenure and NS_SeC

- 3.75 The National Statistics – Socio-economic Classification (NS_SeC) is an Office for National Statistics standard classification. It provides an indication of socio-economic position based on occupation. There is a clear relationship with tenure, as Figure 3.25 shows.

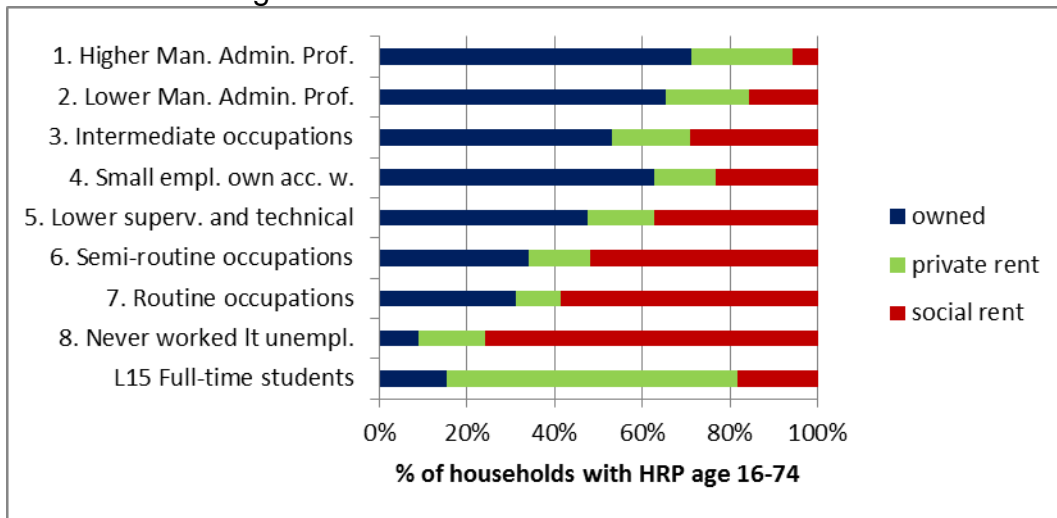

Figure 3.25 – Population by NS_SeC and by Tenure in Glasgow in 2011

Source: NRS - 2011 Census - Crown Copyright Reserved

- 3.76 50.4% of the population aged 16-74 in owner occupation is in the categories 1 to 3 (i.e. the higher and lower managerial, administrative and professional as well as the intermediate occupations). For the private renters the figure is 35.2% and for social renters 17.8%.
- 3.77 45.1% of the population aged 16-74 in social rented housing is in the categories 6 and 7 (semi-routine and routine occupations). This compares with 24.0% of owner occupiers and 17.7% of private renters. 18.5% of social renters belong to the long term unemployed. The latter make up only 3.6% of owner occupiers and 7.2% of private renters.
- 3.78 In the private rented sector 31.1% of the population age 16-74 are full-time students. For owner occupiers and social renters the figures are 8.2% and 7.9% respectively.
- 3.79 Analysis of the tenure profile by NS_SeC for household reference persons (HRPs) shows a similar pattern (see next page, Figure 3.26). 63.2% of the NS_SeC categories 1 to 3 households (i.e. the higher and lower managerial, administrative and professional as well as intermediate occupations) are in owner occupied accommodation and only 17.1% are in social rented accommodation. For NS_SeC categories 6 and 7 (semi-routine and routine occupations) households only 32.7% are in owner occupied and 55.2% are in social rented housing.

Figure 3.26 – Households with HRP age 16-74 by NS-SeC and by Tenure for Glasgow in 2011

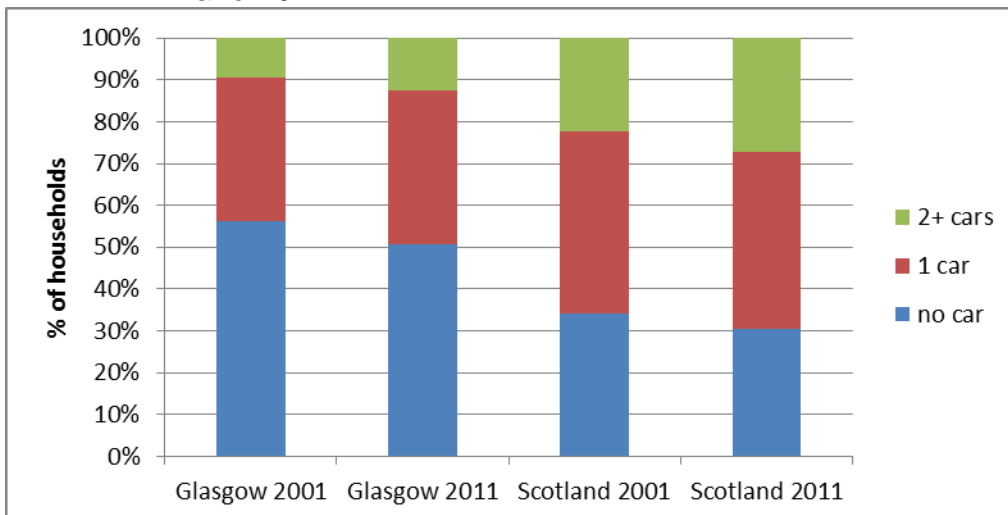

Source: NRS - 2011 Census - Crown Copyright Reserved

Access to a Car or Van

3.80 Access to a car or van in Glasgow is considerably below the Scottish average. Figure 3.27 shows that in 2011 only 49.2% of Glasgow households have access to a car. This compares with 69.5% for Scottish households.

Figure 3.27 – Car access for households in Glasgow and in Scotland in 2001 and 2011

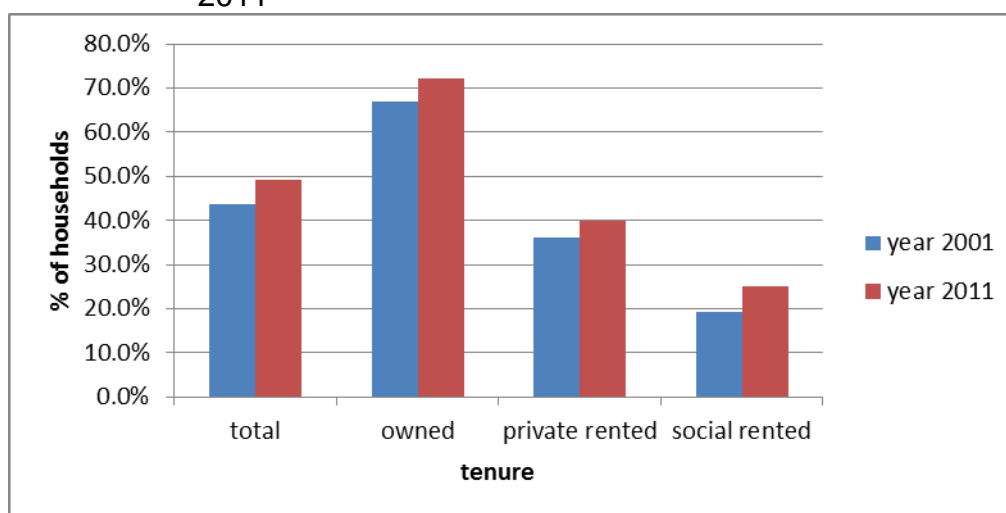

Source: NRS - 2001 and 2011 Census - Crown Copyright Reserved

3.81 Between 2001 and 2011 the percentage of households with access to a car in Glasgow has risen by 5.4%, from 43.8% to 49.2%. The percentage rose by 3.7% in Scotland, from 65.8% in 2001 to 69.5% in 2011.

Tenure and Access to a Car or Van

- 3.82 In 2011 access to a car in Glasgow is highest for owner occupied households (72.3%) and lowest for social rented households (24.9%). Since 2001, access to a car has risen for all three tenures in Glasgow, particularly for the owner occupied and social rented tenures (see Figure 3.28).

Figure 3.28 – Car access for households in Glasgow by Tenure in 2001 and 2011

Source: NRS - 2001 and 2011 Census - Crown Copyright Reserved

- 3.83 Access to a car varies considerably within the City. Rates in 2011 are very low (i.e. below 35%) in City Centre and in more deprived neighbourhoods: City Centre/Merchant City, Parkhead/Dalmarnock, Sighthill/Roystonhill, Ruchill/Possilpark and Greater Gorbals. Car access rates are higher than the national average (i.e. above 69.5%) in the more prosperous neighbourhoods and in some areas close to the City boundary: Kelvindale/Kelvinside, Robroyston/Millerston, Baillieston/Garrowhill, Pollokshields West, South Nitshill/Darnley, Newlands/Cathcart, Cathcart/Simshill and Carmunnock (see Appendix, Table A46).
- 3.84 The rise in the percentage of households with access to a car, since 2001, has been greatest in some of the urban regeneration areas: Drumchapel (from 28.0% to 38.1%), Temple/Annie'sland (from 46.8% to 57.0%), Ruchill/Possilpark (from 23.1% to 34.5%), Easterhouse (from 28.8% to 40.0%), Corkerhill/North Pollok (from 37.6% to 48.3%) and Greater Gorbals (from 22.7% to 34.5%).

Note. This Table has been prepared using Tables S13 and T55. The number of HRPs age 75+ were calculated by subtraction of HRPs age 16-74 from total HRPs by tenure.

Students are all students, including those economically active.

Economically active students excluded from numbers in employment and unemployed.

Economic status HRP	Total	owned	private rent	social rent
student	9,479	1,283	6,212	1,984
age 16-34 in employment	53,317	21,574	22,065	9,678

age 16-34 unempl./econ. inactive	14,061	794	4,180	9,087
age 35+ unempl./econ. inactive	42,112	6,010	4,937	31,165
retired	62,027	31,572	2,776	27,679
total	285,689	130,217	50,664	104,808

Source: NRS -2011 Census - Crown Copyright Reserved

Note. This Table has been prepared using Table DC4601SC

Students are only economically inactive students.

The numbers in employment and unemployed include economically active students.

Retired include only those whose economic status is "retired" irrespective of age.
